breeze

LYX
LUMINAIRES

LYX-luminaires ...

... creates a wide range of solar and low consumption
LED lamps.
designed by Claude Robin.

Made in France, the outdoor lightings
are subject to the most demanding constraints.

Pathway lights to illuminate an alley,
spots to brighten a tree,
floor lamps for garden lighting.

From ephemeral festive ambiance
to more functional installations,
each lamp contributes to the creation
of a unique luminous universe.

Since 2013, LYX-Luminaires has been committed
to a responsible approach

* Through Eco-design

From the pre-study stage, the products are designed with the intention of reducing material consumption as well as the energy required for manufacturing (Limit the number of welds, optimize cutting ...), to maximize the life of the product.

* The use of solar sources

Designed and developed in France by an independent engineering office, solar collectors are regularly optimized according to the latest technological advances .

The current components allow increasingly efficient yields.

* The use of low consumption LED sources

LED sources generate the highest efficiency. Miniaturized devices are perfectly integrated into steel envelopes, to provide direct and indirect lighting.

* Local manufacturing in France

The assumed choice of local manufacturing in France is part of our identity. We share with our ISO 9001 & ISO 3834 certified partner workshops, the recognition of our products.

* The durability of our repairable and scalable products

We are able to repair a damaged product or repaint a product faded over time. Our new lighting sources are compatible with our original models.

* The use of returnable dust covers ...

We manufacture dust covers, made of linen from France. Once returned, the dust covers are reused for our shipments.

* ... and of reused packaging

We optimize the reuse of pallets, cartons and multi-material shims from our suppliers with the goal of achieving zero packaging waste.

WARNING

Due to increasing costs of raw materials,
our listed prices are just estimates
and will have to be confirmed on a pro forma invoice
prior to any new order.

Sorry for the inconvenience
and thank you for your understanding.

... In an effort to reduce
our impact on the environment

The shipment of our lamps requires
an important level of protection.

We manufacture dust covers in French linen
that are fully redeemable and reusable.

Once returned, dust covers are reused
to ship our products.

Our objective is to progressively eliminate
the use of plastic in our activity.
